SKILLBRIDGE AI

Evidence-based skills assessment & recruitment

Karachi, Pakistan | Proposed launch with nationwide expansion potential

INVESTOR-READY BUSINESS PLAN

A practical launch strategy combining market validation, responsible AI, assessment quality, employer pilots, and transparent financial scenarios.

Planning edition | 2 November 2026

Important: This is a planning document. Market-size inputs, prices, targets, budgets and forecasts are assumptions to validate; no partnerships, customers or results are represented as secured.

Evidence labels used throughout

Verified context: attributed to a cited public source. **Assumption:** an input selected for planning, not independently verified. **Proposed target:** a goal to test. **Forecast:** an illustrative outcome dependent on assumptions.

Scope note: This plan is designed for an early-stage, founder-led startup. Legal and tax information is a research summary, not legal advice. Obtain qualified local advice before incorporation, processing live candidate data, or issuing invoices.

1. Executive Summary

SkillBridge AI is a proposed AI-assisted skills assessment and recruitment platform that helps early-career candidates demonstrate job-relevant capability and helps employers review evidence beyond CV keywords. The initial launch focus is Karachi, with expansion to other Pakistani cities only after pilot validation.

The problem hypothesis: students and career switchers often struggle to translate coursework into credible work evidence, while small and mid-sized employers spend time screening large applicant pools with inconsistent signals. The platform will combine role-based assessments, transparent rubrics, skills-gap reports, learning recommendations, project evidence, and candidate-approved profile sharing.

Primary users: university students, fresh graduates, bootcamp/training alumni, career switchers, SMEs, software houses, and university career offices. The first niche should be deliberately narrow: entry-level software, data, digital marketing, and business operations roles where skills can be assessed through practical tasks.

Business model: employer-paid pilot packages, per-campaign hiring services, employer subscriptions, and institutional partnerships. Candidates should be able to create a basic profile and complete a limited core assessment without payment during the pilot, reducing access barriers and supporting a two-sided marketplace.

90-day goal (proposed): interview 30 employers and 60 candidates; validate 5 role rubrics; build a clickable prototype and a secure MVP beta; recruit 100 candidates; and secure 3 employer pilot letters of intent. 12-month goal (proposed): 1,500 registrations, 600 completed assessments, 15 paying employer accounts/campaigns, 3 institutional partnerships, and a repeatable monthly revenue process.

Initial six-month planning budget: PKR 4,000,000, used as a working assumption for prioritization—not a verified funding requirement. The team should validate costs and runway before fundraising. The likely funding ask should be tied to a milestone-based budget, with a 10–15% contingency and no assumption of immediate profitability.

Potential partners include university career offices and societies, training institutes, local software houses, SME networks, HR communities, and relevant technology ecosystem programs. No partnership is assumed to exist until formally agreed.

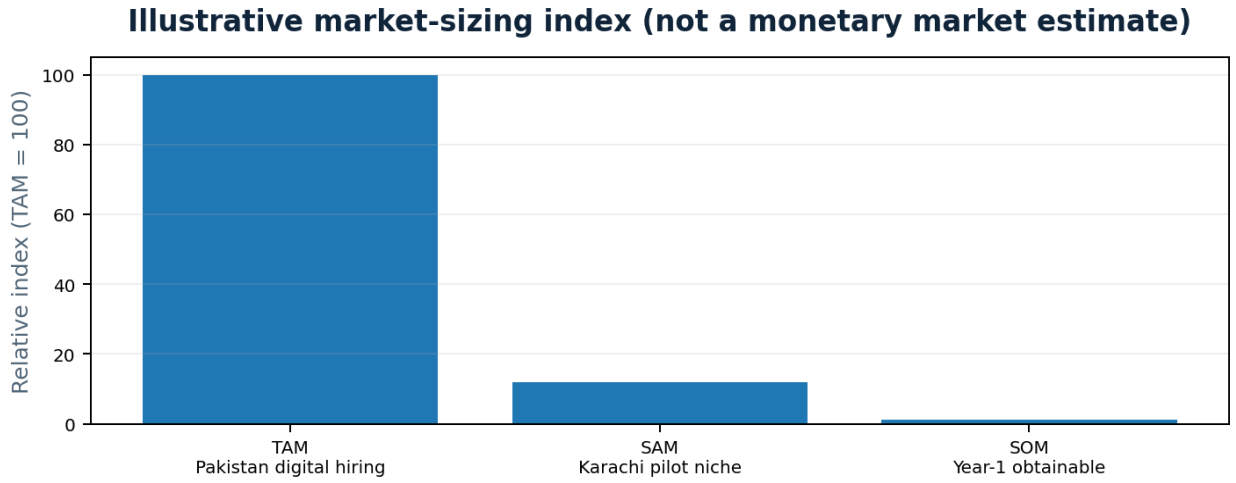

Milestones: discovery and problem validation; prototype; MVP beta; closed pilot; commercial validation; public launch; 12-month review. Success depends on candidate trust, assessment quality, employer willingness to pay, and repeat hiring—not registration volume alone.

2. Problem & Market Opportunity

Pakistan's labour market provides a meaningful context, but it does not by itself prove demand for this product. The Pakistan Bureau of Statistics Labour Force Survey 2024–25 reports an unemployment rate of 6.9%, up from 6.3% in 2020–21 under the survey's stated comparison framework. The Pakistan Economic Survey 2025–26 reports ICT export remittances of about US$3.38 billion for July–March FY2026, up 19.7% year-on-year. These are contextual indicators, not a direct estimate of SkillBridge AI's addressable market.

Customer pain hypotheses to validate: candidates lack feedback on what to learn next; employers struggle to compare applicants consistently; universities need measurable employability outcomes; training institutes want evidence that learners can apply skills. Conduct 30 employer interviews, 60 candidate interviews/surveys, and 10 university/training-provider interviews before committing to the full feature set.

Initial customer segments: (1) final-year students and fresh graduates, (2) training-program graduates, (3) SME/software-house hiring managers, (4) university career offices, and (5) training institutes. Start with 2–3 job families and a limited number of assessment templates to avoid an unmanageable catalogue.

Illustrative market-sizing index only. Monetary TAM/SAM/SOM calculations are scenario inputs and require validation from a named employer database and willingness-to-pay interviews.

Market-sizing method: build a bottom-up estimate from reachable employers, hiring frequency, likely annual spend, and obtainable institutional contracts. Do not use Pakistan's entire labour force as the market. TAM = annual potential spend across the selected national employer segments; SAM = reachable employers and institutions in the initial job families and geographies; SOM = realistic 12–24 month share constrained by sales capacity and delivery bandwidth.

Illustrative sizing framework (assumptions only): TAM: 10,000 relevant employers × PKR 300,000 annual spend = PKR 3.0bn; SAM: 1,500 Karachi/remote-first employers × PKR 240,000 = PKR 360m; SOM: 30 accounts × PKR 240,000 = PKR 7.2m annualized. These are scenario inputs, not externally verified counts; replace them with a researched employer list and validated willingness-to-pay data.

Research methodology: desk research (PBS, Economic Survey, SECP, policy and competitor pages); job-description sampling (at least 100 live/recent postings); structured interviews; landing-page conversion test; and paid-pilot willingness-to-pay test. Record source date, sampling limitations, and confidence level in the research log.

3. Solution & Product Scope

SkillBridge AI should be positioned as an evidence layer between learning and hiring, not as an automated hiring decision-maker. The platform will generate structured signals and recommendations; employers retain decision authority, and candidates control whether their profile is shared.

MVP launch scope: candidate registration and consent; career-role selection; 3–5 practical assessments; rubric-based scoring; skills-gap report; curated learning recommendations; project evidence uploads/links; candidate-controlled shareable profile; employer dashboard for viewing opted-in profiles; shortlist notes; feedback capture; basic admin moderation and audit logs.

Candidate journey | consent-based sharing

Future enhancements only after evidence of demand: more role families; institutional cohort dashboards; assessment proctoring with privacy review; verified credentials; ATS integrations; multilingual UX; employer APIs; cohort analytics; and calibrated AI-assisted job-description parsing. Avoid high-cost features before repeatable paid demand.

Assessment design principles: use job-analysis-derived competencies, transparent rubrics, sample tasks, clear time expectations, accessibility accommodations, and periodic review by practitioners. Store score components and rubric versions. Do not claim a score predicts job performance until validated against meaningful outcomes.

AI guardrails: disclose AI use; avoid inferring protected or sensitive attributes; provide explanations and appeal/correction routes; test adverse impact; allow human review; monitor drift; and do not automatically reject candidates. Candidate consent must be granular and revocable for profile sharing.

Employer workflow | human-in-the-loop

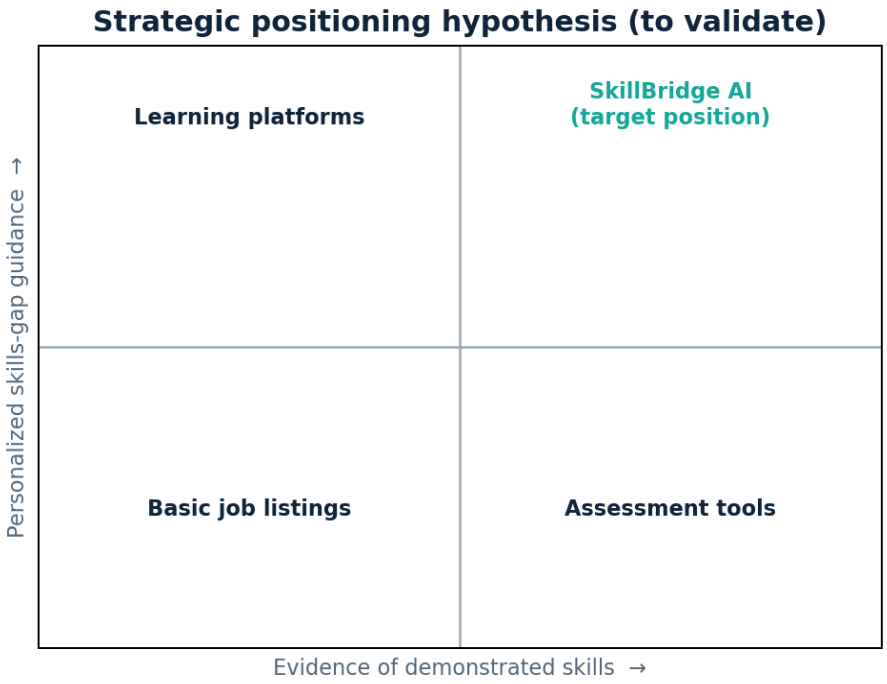

4. Competitor Analysis & Positioning

Competitor categories overlap, and SkillBridge AI should not claim superiority without testing. ROZEE.PK is an established local job/recruitment platform offering employer hiring products; learning platforms such as Coursera focus on courses and skills development; global assessment vendors such as HackerRank focus on technical assessments; recruitment agencies provide human-led sourcing; and university career services offer campus access and guidance.

Proposed differentiation hypothesis: connect role-specific assessment evidence, skills-gap recommendations, project proof, and candidate-approved sharing in one workflow for early-career talent. Validate through side-by-side employer interviews and candidate usability tests.

Positioning matrix is a strategic hypothesis, not an independently verified rating of competitor products. The two axes—evidence of demonstrated skills and personalized skills-gap guidance—are intentionally simplified. Many competitors have features that span multiple quadrants.

Alternative	Primary value	Potential gap SkillBridge tests	How to validate
ROZEE.PK / job portals	Job listings, CV search, employer hiring tools	Whether structured practical evidence improves early-career screening	Interview hiring managers; compare shortlist quality and workflow time
Learning platforms	Courses, certificates, learning analytics	Whether employers need a bridge from learning to job-specific evidence	Test course completion vs practical task evidence
Assessment vendors	Role-based tests and technical assessment workflows	Whether local entry-level role rubrics + learning-gap reports are useful	Run matched sample with employer reviewers
Recruitment agencies	Human-led sourcing, screening and coordination	Whether lower-cost repeatable evidence workflow serves SMEs	Compare price, speed, service level and candidate experience
University career services	Campus access, coaching, employer connections	Whether shared assessment evidence adds value to existing services	Pilot with career office; avoid duplicating current tools

The matrix is a strategic hypothesis, not a verified scoring of named competitors. Feature boundaries change; verify current product pages and interview users before making comparative claims.

5. Business Model & Pricing

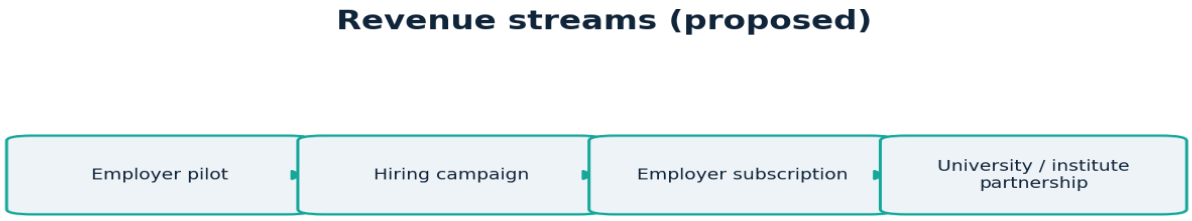

Revenue streams: (1) employer pilot package with role setup, a capped cohort and results review; (2) hiring campaign priced by role and campaign duration; (3) employer subscription for recurring access to opted-in talent and workflow tools; and (4) university/training-institute partnerships for cohort assessment and employability reporting.

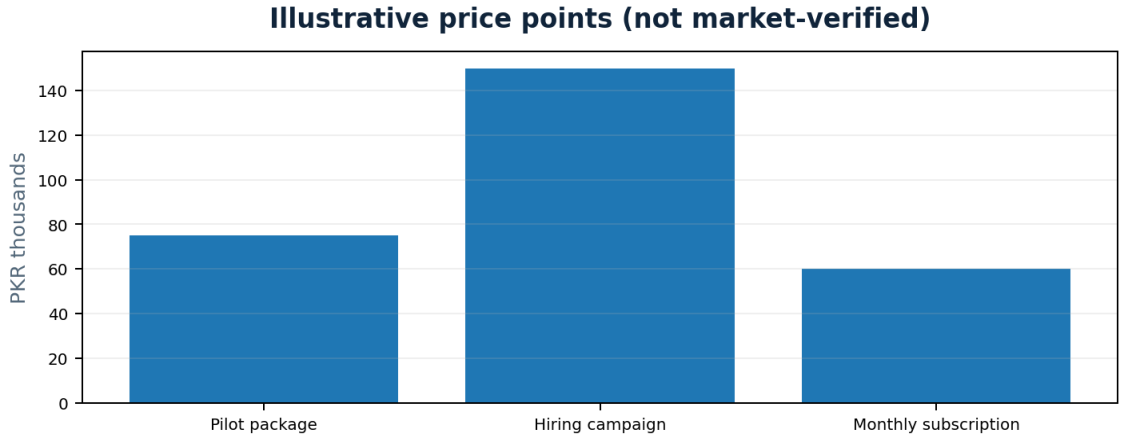

Illustrative price menu for validation: Pilot package PKR 75,000 per cohort; hiring campaign PKR 150,000 per role/campaign; employer subscription PKR 60,000 per month; institutional cohort package PKR 200,000–500,000 per term depending on volume and support. These are proposed test prices, not verified market rates.

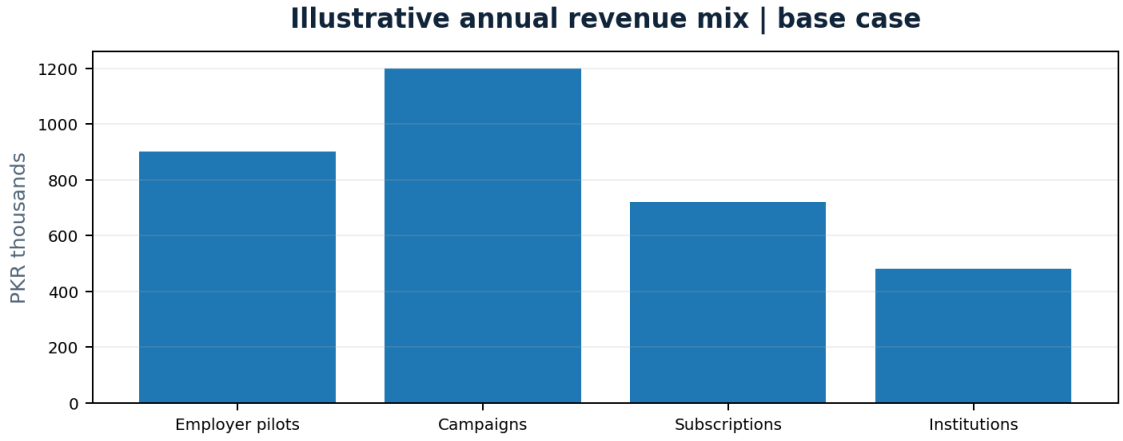

Unit-economics hypothesis: a PKR 75,000 pilot should have direct delivery costs below PKR 30,000 to target at least 60% gross margin before fixed operating expenses. A PKR 150,000 campaign should have direct delivery costs below PKR 60,000. Subscriptions should be designed to scale with limited manual curation; track human-review hours carefully.

Base-case annual revenue scenario (illustrative): pilots PKR 900,000; hiring campaigns PKR 1,200,000; subscriptions PKR 720,000; institutional contracts PKR 480,000; total PKR 3,300,000. This is revenue, not profit. It excludes taxes, bad debt, refunds and financing costs and assumes sales ramp over the year.

Monthly revenue can remain below operating costs through the first year. The business should not hire ahead of signed demand. Use deposits or milestone payments for pilots, invoice promptly, and track sales cycle, gross margin per package, renewal rate, and cash collection days.

6. Go-to-Market Strategy

Start with a narrow Karachi beachhead: software houses and SMEs hiring junior developers, data analysts, QA testers, digital marketers, and operations analysts. Approach hiring managers with a concrete offer: a small candidate cohort, a jointly agreed rubric, a time-boxed assessment, and a feedback session—not a generic platform demo.

Candidate acquisition: university societies and career offices; training-institute alumni; student referrals; LinkedIn content showing anonymized sample assessments; portfolio-building workshops; and assessment challenges. Avoid implying that completing a test guarantees employment.

Employer acquisition: founder-led outreach to 100 target employers; warm introductions through alumni and faculty; HR community sessions; free discovery audits; and three tightly scoped paid or discounted pilots. Convert pilot results into case studies only with written permission and accurate methodology.

Proposed 90-day funnel targets: 1,000 awareness reach; 300 landing-page visits; 150 registrations; 100 assessment starts; 70 completed assessments; 50 candidate-approved active profiles; 15 employer conversations; 5 pilot proposals; and 3 pilot commitments. These are targets for learning, not forecasts.

Review conversion weekly. If candidates register but do not complete assessments, shorten tasks and improve instructions. If employers engage but will not pay, refine the use case and buyer persona before increasing marketing spend.

Proposed 90-day funnel scorecard

Stage	Proposed target	Measure
Awareness	1,000	Reach / impressions; remove duplicates where possible
Landing-page visits	300	Unique sessions
Registrations	150	Verified accounts
Assessment starts / completions	100 / 70	Completion rate = completed ÷ starts
Active profiles	50	Candidate-approved profile with evidence
Employer conversations	15	Qualified buyer meetings
Pilot proposals / commitments	5 / 3	Written scope and next step

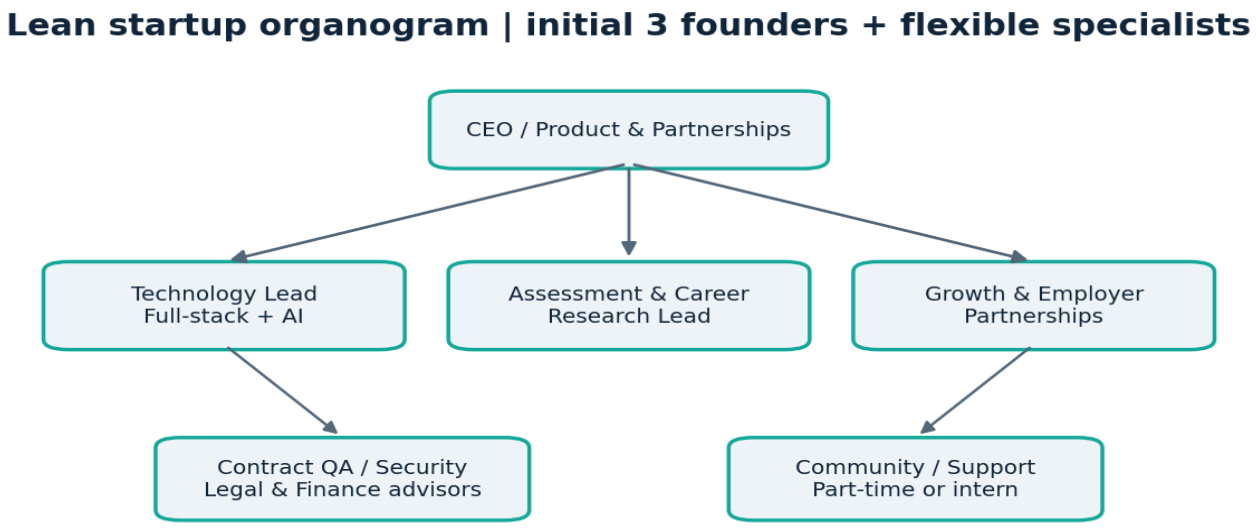

7. Operations, Team & Organogram

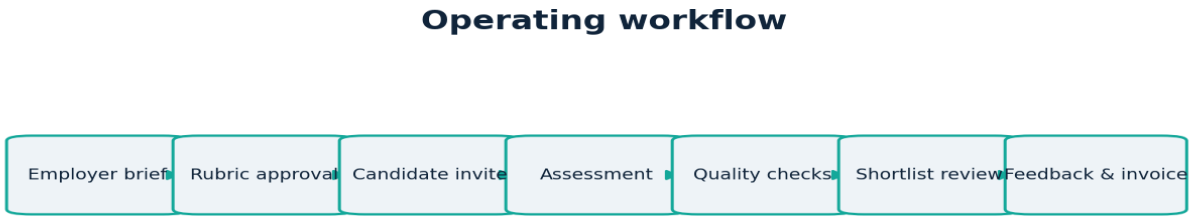

Lean founding structure: CEO/Product & Partnerships; Technology Lead (full-stack, data, AI integration); Assessment & Career Research Lead; Growth & Employer Partnerships. Some roles may be combined among founders initially. Use part-time or contracted support for UI/UX, QA/security, legal, accounting/tax, and content moderation.

Decision rights: product scope and budget—CEO with founder review; security and architecture—Technology Lead; assessment validity and rubric changes—Assessment Lead; employer commitments and pricing—CEO/Growth; legal, tax and privacy advice—qualified external advisors. Any major change to candidate data use requires documented review.

Weekly operating rhythm: Monday priorities and metrics; midweek product/assessment review; Friday customer calls, demo, cash and risk review. Maintain a single product backlog, research log, decision log, incident register, and monthly cash forecast.

RACI principle: one accountable owner per deliverable, even when multiple contributors are responsible. Do not represent outsourced advisors as employees or promise full-time capacity before it is funded.

Workstream	Accountable	Responsible / consulted
Product & budget	CEO	All founders; finance adviser
Platform & security	Technology Lead	Contract QA/security specialist
Assessment validity	Assessment Lead	Practitioners, employer reviewers
Sales & partnerships	CEO / Growth	Founder team; university contacts
Legal, tax & privacy	CEO	External lawyer/accountant
Candidate support	Growth / Ops	Part-time support / trained interns

8. Legal, Regulatory & Risk Management

Company formation: SECP states that two or more persons may form a private company under the Companies Act, 2017, and describes online incorporation through its eZfile process. Choose legal structure with a Pakistani corporate adviser; verify name availability, incorporation forms, annual filings and current fees directly with SECP.

Tax: FBR states that companies and AOPs are e-enrolled through Iris and receive an NTN/registration number. Since SkillBridge AI will operate from Karachi, review whether its services fall within Sindh Sales Tax on Services rules and applicable registration/return obligations with SRB and a tax adviser. Do not assume one tax rate applies to every service or customer.

Privacy and data protection: as of the research date, an enacted comprehensive standalone personal data protection law was not identified in the reviewed sources; the 2023 Personal Data Protection Bill record shows it was not passed/rejected by the committee and was disposed of. This is not a legal opinion. PECA and other laws may still apply. Check current legal status with counsel before launch and monitor new legislation.

Minimum controls recommended regardless of the evolving legal framework: plain-language privacy notice; purpose limitation; consent and revocation; candidate profile-sharing controls; data retention/deletion schedule; access controls and MFA; encryption in transit and at rest; secure backups; incident response; vendor due diligence; and written employer/institution agreements.

Contracts should define service scope, payment, refunds, IP ownership, permitted data use, confidentiality, liability limits, security obligations, candidate communications, and termination. Ensure assessment tasks and code/content have clear licensing and that contractor IP is assigned in writing.

AI fairness and security are product risks: use job-related criteria, document rubric versions, audit outcomes across relevant groups where lawful and appropriate, prevent proxy discrimination, provide human review and appeals, conduct penetration/security testing before broad launch, and prohibit use of candidate data to train external models unless specifically reviewed and consented.

Risk	Likelihood	Impact	Mitigation	Owner
Low employer willingness to pay	High	High	Paid discovery; pilot deposits; gate spending	CEO / Growth
Biased or weak assessment	Medium	High	Job analysis, rubric review, appeals, outcome audits	Assessment Lead
Candidate data exposure	Medium	Very high	Least privilege, MFA, encryption, backups, incident plan, security test	Technology Lead
Unclear legal/tax classification	Medium	High	Local counsel/accountant review; monitor SRB/FBR updates	CEO
AI output errors / over-reliance	Medium	High	Human review, explainability, confidence limits, override logs	Product / Tech
Low assessment completion	Medium	Medium	Usability tests, accessible design, shorter tasks, reminders	Product
Cash runway shortfall	High	High	Monthly rolling forecast; staged hiring; three-month cash floor	CEO / Finance
Partner or vendor dependency	Medium	Medium	Written agreements, backups, exportable data, exit plans	Operations

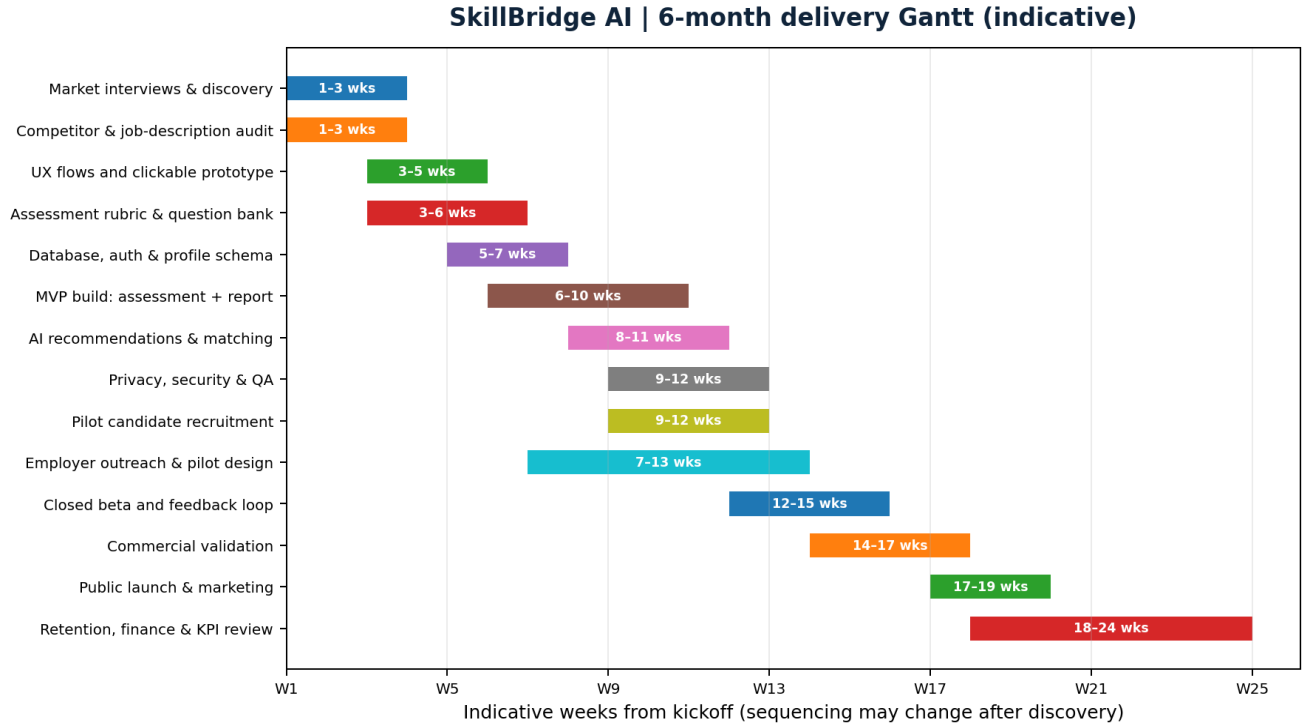

Regulatory status can change. Confirm the current legal position with qualified Pakistani counsel before launch. This report is not a legal opinion.

9. Execution Timeline

First 30 days: interview customers, map job descriptions, validate one initial job family, draft scoring rubrics, create clickable prototype, prepare privacy/consent flows, and define success metrics. Gate: proceed only if at least 10 employers describe a clear, costly screening problem and several agree to pilot discussions.

Days 31–60: implement registration, assessment delivery, rubric scoring, report generation, profile sharing controls, employer view, basic audit logs and admin tools. Run internal QA and usability tests. Gate: no critical security defects; at least 80% of test users can complete the core journey without facilitator help.

Days 61–90: run a closed pilot with 50–100 candidates and 3–5 employers; compare assessment output with employer review; measure completion, shortlist usefulness, feedback, time saved and willingness to pay. Gate: obtain written pilot feedback and at least one paid conversion or a documented pivot decision.

Gantt is indicative and shows a 24-week delivery plan. Weeks are counted from kickoff; exact dates depend on founder capacity, vendor lead times and pilot access.

9.1 Twelve-month roadmap & stage gates

Period	Focus	Milestone / completion evidence	Decision gate
Month 1	Discovery & problem validation	Interview notes, 100 job descriptions initiated, initial role choice	Confirm repeated employer pain
Month 2	Prototype & assessment design	Clickable prototype, rubric v1, privacy/consent design	Usability: ≥80% unassisted core-task completion (target)
Month 3	MVP beta & pilot setup	Secure beta, 50–100 candidate cohort recruited, 3–5 employers engaged	No critical security issues; pilot terms agreed
Months 4–6	Pilot delivery & refinement	Feedback report, pricing tests, first paid conversion target	Continue only if value and willingness to pay are evidenced
Months 7–9	Repeatable sales motion	One adjacent role family; first renewals; unit economics tracked	Gross margin and repeat usage improving
Months 10–12	Public launch readiness	Support process, legal review, security retest, KPI review	Launch only after trust and commercial gates pass

Critical dependencies

Assessment rubrics and consent design should be approved before live candidate testing. Employer commitments should precede expanding the role catalogue. Security testing and incident procedures should precede public launch. Financial review should occur monthly, with a formal day-30, day-60, day-90, and month-12 decision record.

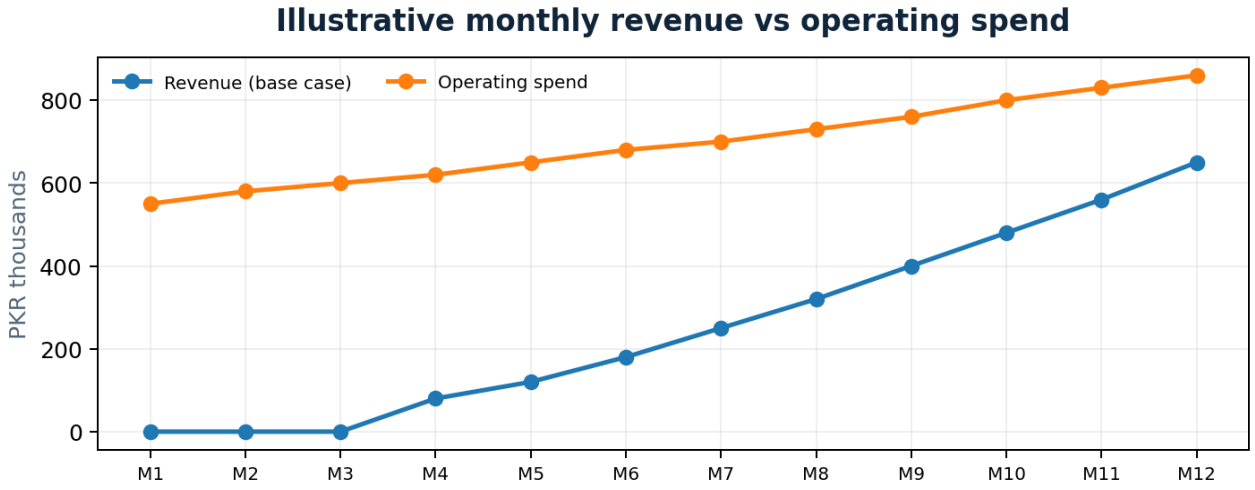

10. Financial Plan

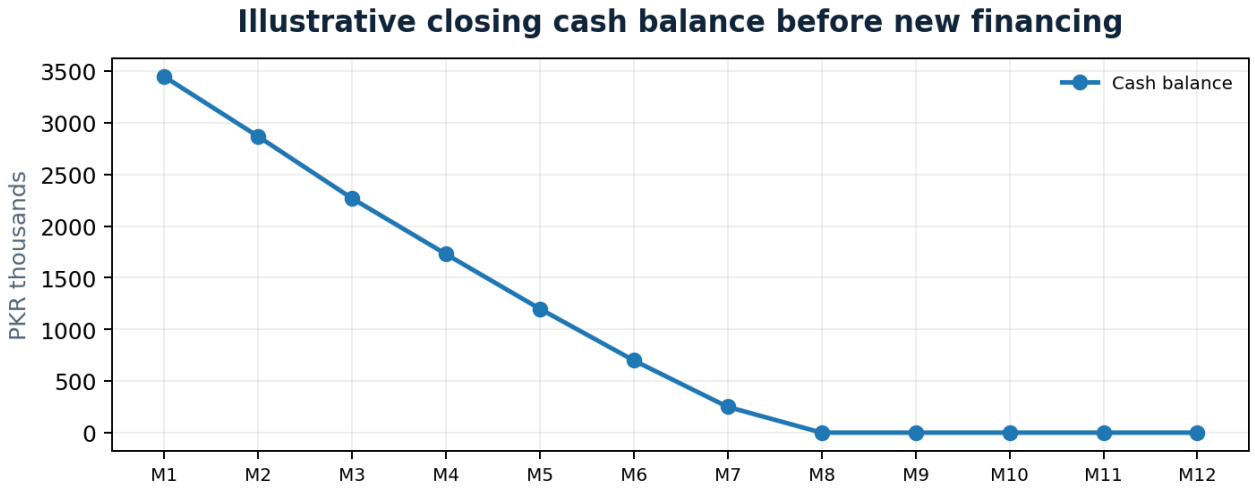

Budget basis: PKR 4,000,000 is a planning assumption for the first six months, not a verified funding requirement. Illustrative allocation: product and engineering PKR 1.45m; assessment/content and research PKR 0.45m; marketing and sales PKR 0.45m; AI/API/hosting/tools PKR 0.30m; legal, accounting and compliance PKR 0.25m; operations and support PKR 0.55m; contingency PKR 0.55m. Validate local quotes, founder contributions and whether any founders defer salary.

Illustrative base-case revenue: PKR 3.3m for year one. Conservative scenario PKR 1.2m; optimistic scenario PKR 6.0m. These are scenario outputs based on assumed package volumes, not market research. Base-case operating expense planning may reach approximately PKR 8.3m over 12 months if the team scales; this would imply a substantial operating loss unless costs are reduced or funding/revenue rises.

Six-month planning allocation	PKR	Share
Product & engineering	1,450,000	36.25%
Assessment/content & research	450,000	11.25%
Marketing & sales	450,000	11.25%
AI/API/hosting/tools	300,000	7.50%
Legal, accounting & compliance	250,000	6.25%
Operations & support	550,000	13.75%
Contingency	550,000	13.75%
Total	4,000,000	100%

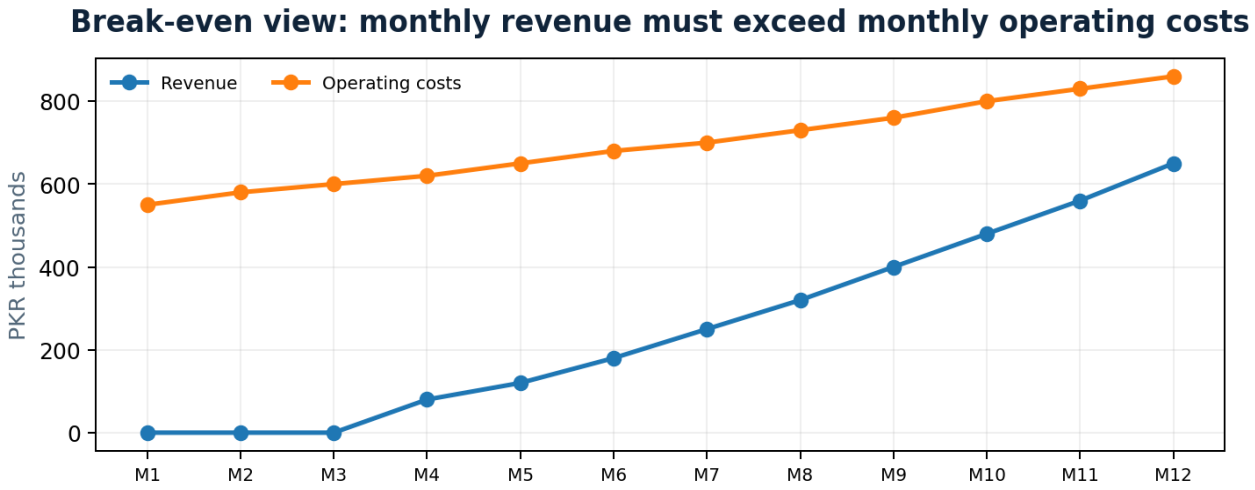

Budget is a planning assumption; obtain current quotations and founder compensation decisions before treating it as a funding request.

10.1 Scenario analysis & break-even

Scenario	Year-1 revenue	Cost posture	Interpretation
Conservative	PKR 1.2m	Freeze nonessential hiring; limited pilots	Demand validates slowly; preserve cash and narrow scope
Base	PKR 3.3m	Lean team; staged product and sales spend	Revenue does not cover assumed full-year operating costs
Optimistic	PKR 6.0m	More campaigns and institution deals; delivery capacity needed	Still requires gross-margin and cash discipline

Base-case monthly operating spend is modelled at PKR 550k in month 1, rising gradually to PKR 860k by month 12; this is an illustrative model and not a salary quote. Revenue is modelled to rise from zero to PKR 650k/month by month 12. Revenue and expenses must be reviewed monthly against actual invoices, payroll commitments, taxes and cash collection.

Runway: a PKR 4.0m starting pool at an average net burn of PKR 600k/month lasts about 6.7 months before considering revenue and timing effects. If revenue underperforms, reduce discretionary spend, defer hiring, and reassess scope before cash falls below three months of committed costs.

Break-even requires monthly revenue to cover direct delivery costs and operating expenses. At a 65% gross margin and PKR 800k monthly fixed costs, approximate monthly revenue break-even is PKR 1.23m (800k ÷ 0.65), before tax, interest and extraordinary items. This is a formula-based illustration, not a forecast that break-even will occur in year one.

Indicative 24-month outlook: do not extrapolate the first-year base case mechanically. In a base scenario, aim to prove repeat purchases in year one, then grow annual revenue toward PKR 8–12m in year two only if renewal, margin and delivery capacity support it. Prepare monthly cashflow, income statement and balance sheet with a qualified accountant before investor diligence.

11. KPIs & Performance Dashboard

North-star metric: number of employer-reviewed, candidate-approved profiles that lead to a documented interview or next-step decision. Avoid optimizing solely for registrations or raw assessment volume.

Candidate metrics: registrations, assessment-start rate, completion rate, time to complete, active profile rate, 30-day retention, report usefulness rating, accessibility complaints, and profile-sharing consent/revocation.

Employer metrics: discovery-to-pilot conversion, time from job brief to shortlist, shortlist-to-interview rate, repeat campaign rate, employer satisfaction, number of qualified shortlists, and days sales outstanding.

Business metrics: paid pilots, monthly recurring revenue, recognized revenue, gross margin per package, customer acquisition cost, sales cycle, operating expense, cash runway, collection rate, and revenue concentration.

Quality and trust metrics: assessment consistency, rubric review frequency, score appeals, completion disparities, security incidents, data deletion requests, and AI recommendation acceptance. Targets are proposed; set baselines during the pilot and avoid unsupported claims about predictive validity.

Metric	Definition	Proposed target / baseline	Frequency	Owner
Registration	Verified candidate accounts	150 by day 90	Weekly	Growth
Assessment completion	Completed ÷ started	≥70% in pilot; revise after baseline	Weekly	Product
Active profiles	Profile + evidence + sharing choice	50 by day 90	Weekly	Candidate Ops
Employer engagement	Qualified buyer conversations	15 by day 90	Weekly	CEO / Growth
Paid pilots	Signed paid or clearly scoped pilot	3 commitments by day 90 (target)	Monthly	CEO
Shortlist-to-interview	Interviews ÷ shortlisted candidates	Baseline in pilot; improve over time	Per campaign	Employer Success
CAC	Sales/marketing spend ÷ new paying accounts	Establish baseline by month 6	Monthly	Finance
Gross margin	(Revenue – direct costs) ÷ revenue	≥60% per pilot package target	Per package	Finance
Cash runway	Cash ÷ average monthly net burn	Maintain ≥3 months committed costs	Monthly	CEO
Satisfaction	Post-task / post-campaign rating	≥4/5 target, survey response disclosed	Monthly	Product
Assessment consistency	Reviewer agreement / repeatability checks	Set baseline before public claims	Per rubric version	Assessment Lead

12. Next Actions

1. Interview 15 employers and 30 candidates within 14 days; owner: CEO/Research; deliverable: anonymized problem log and ranked needs.

2. Collect and code 100 job descriptions across 2–3 entry-level roles within 21 days; owner: Assessment Lead; deliverable: competency map and evidence table.

3. Benchmark 8–10 competitor/alternative workflows within 21 days; owner: Product; deliverable: feature/pricing/source matrix with capture dates.

4. Draft one practical assessment and scoring rubric within 21 days; owner: Assessment Lead; deliverable: rubric, sample task, reviewer guide and bias checklist.

5. Build clickable prototype and test with 8–10 users within 30 days; owner: Product/Design; deliverable: usability findings and prioritized backlog.

6. Build a list of 100 Karachi employers and contact 30 within 30 days; owner: Growth; deliverable: CRM pipeline and discovery meetings.

7. Get legal review of company structure, privacy notice, consent, contracts and tax treatment before collecting live candidate data; owner: CEO + external counsel; deliverable: launch-readiness checklist.

8. Validate the PKR 4m budget with three quotes per major cost category and a monthly cash model within 30 days; owner: Finance/CEO; deliverable: downside/base/upside forecast.

9. Define pilot success gates and written data-sharing terms before inviting candidates; owner: Product + Assessment; deliverable: pilot protocol and employer agreement.

10. Review evidence at day 30 and day 60; owner: all founders; deliverable: continue/pivot decision and updated funding need.

Founder operating principle

Validate the riskiest assumptions first: whether employers will pay, whether candidates finish the assessment, whether evidence improves hiring decisions, and whether the service can be delivered at a sustainable gross margin. Build only what these tests justify.

Key assumptions register

Input	Current planning value	Validation method
Initial geography	Karachi; later national/remote	Employer list and sales capacity
Initial roles	Software, data, digital marketing / operations	100 job descriptions + employer interviews
Six-month budget	PKR 4.0m	Quotes, founder salary assumptions, cashflow
Year-1 revenue scenarios	PKR 1.2m / 3.3m / 6.0m	Pilot conversion, price tests, renewals
Price points	PKR 60k–150k employer offers; institution package variable	Willingness-to-pay interviews and paid tests
TAM/SAM/SOM example	PKR 3.0bn / 360m / 7.2m annualized	Replace assumed account counts with sourced list
